14-16 May 2019, Melbourne Convention & Exhibition Centre

	TUE	WED	THU
Open	10:30	7:00	9:30
Close	16:45	16:00	13:00

F220/Net2 Network

The Pertronic F220/Net2 analogue addressable fire indicator panel is proving ideal for a wide range of systems, from small buildings with single, stand-alone panels to large facilities protected by multiple networked panels.

Adaptive messaging in the Pertronic Net2 Network prioritises alarms and important control signals to ensure rapid transmission even under extreme network load situations. A 133-node Pertronic Net2 Network System has been independently certified for compliance with AS 7240.13: 2006 by an IANZ accredited laboratory.

Find out how the F220's user-friendly display and keyboard simplifies fire system installation, operation and maintenance.

Emergency Telephone System (ETS)

The Pertronic Emergency Telephone System allows fire-fighters to communicate in facilities where hand-held two-way radios may not be dependable. The fault-tolerant Pertronic ETS remains fully functional even with a short or open-circuit fault on the loop cabling.

Visitors to our stand will be able to put short or open-circuit faults on our demonstration ETS system, and see for themselves how the system copes with cable faults.

Pertronic FireMap®

FireMap version 5.0 provides remote monitoring and graphic-based touch-screen control of Pertronic F220 fire detection, alarm, and suppression control systems, including the large Pertronic Net2 Network in Sydney's M4E Motorway Tunnels.

Our demonstration system shows how easy it is to set up a graphic user interface for a Pertronic F220/Net2 system.

Visit us at Booth 112, Fire Australia 2019 to see the latest Pertronic Fire Detection and Alarm Products
